

1 Nephi 1 — Persian Study Guide

Intro

The source text has three layers: (1) a **book-level summary** of all of 1 Nephi (lines 1–16), which previews Lehi's whole story — Sariah, the four sons, the journey into the wilderness, Ishmael's daughters, the ship, the promised land — and is therefore full of vocabulary you won't meet again for many chapters; (2) a short **chapter heading** summarizing chapter 1 itself (lines 17–24); and (3) the **20 verses** of chapter 1 proper (lines 25–155). Content-wise, chapter 1 is Nephi introducing himself, describing his father Lehi's vision of a pillar of fire and book of prophecy, Jerusalem's coming destruction, and the Jews' mockery and threats; Nephi closes by saying the Lord (Sarvar) delivers those with faith.

Read the cleaned source at [01/normalized.txt](#) while working through this guide. A few artifacts remain that the normalizer can't fix because they're typographic, not orthographic:

- Stray combining marks (́) sometimes appear alone on a line — these are drifted diacritics from PDF extraction; ignore them.
- The book-summary block has unusual PDF column flow: some words wrap across lines in ways that look wrong until you reassemble them. In particular:
 - Lines 4 + 3: ثرى = ا، (Şariyā, Sariah — Lehi's wife).
 - Lines 14 + 13: خر + مساران = خرّمساران (the translator's rendering of "Bountiful" — the coastal place where Nephi builds the ship).
- Chapter-1 body has similar splits at line breaks:
 - Lines 51–52 / 65–66 / 145–146: حت + ى = حتّى (ḥattā, "even").
 - Lines 66–67: رده شد + ب = بُرده شد (borde šod, "was carried").
 - Lines 70–71: ت های + جمعی = جمعیت های (jam 'iyyat-hā-ye, "multitudes of").
- Lines 42 and 107 are page-header artifacts (یافین ...) with the chapter name reversed. Skip them.

Long vowels ā ī ū, short a e o. Consonants: š ž x ‘ ’ č j. Ezafe -e / -ye. Object marker -rā. Indefinite -ī. Possessive suffixes -am -at -aš -mān -tān -šān.

Vocabulary

Organized in **order of first appearance**, grouped by verse. A word appears in the verse where you first encounter it; inflected forms of a verb already introduced (e.g. a new past-tense of a verb you saw earlier) are not re-listed. Proper nouns are mixed in where they first appear, tagged **[proper]**. Verbs include infinitive and present stem. Line numbers reference [01/normalized.txt](#).

Grammar notes

Twelve points. Every example is taken verbatim from [01/normalized.txt](#) (line numbers cited) and shown in three rows: Persian, transcription, English.

1. چنین گذشت — "and it came to pass"

A Hebrew/biblical calque that opens many verses. Structurally it's **čonīn** ("thus") + past of **gozaštan** ("to pass"). Treat it as a fixed idiom; don't try to unpack "thus passed" mechanically.

Lines 41–43: زیرا چنین گذشت در آغاز نخستین سال فرمانروایی صدقیاء پادشاه یهودا *zīrā čonīn gozašt dar āqāz-e noxostīn sāl-e farmān-ravāyī-ye Šedqiyā, pādšāh-e Yahūdā* For it came to pass in the beginning of the first year of the reign of Zedekiah, king of Judah.

2. Passive voice with شدن

Persian forms the passive with **[past participle] + شدن** (conjugated). The agent, if named, is introduced with **از سوی** ("by the hand of") — there's a classic example in verse 7.

Line 23: از سوی یهودیان آزار داده می‌شود *az sūy-e Yahūdiyān āzār dāde mī-šavad* He is persecuted by the Jews.

Another (future passive): lines 91–93 ساکنان آن نابود خواهند شد ... بسیاری با شمشیر هلاک خواهند شد — the inhabitants will be destroyed, many will perish by the sword, and many will be carried captive to Babylon.

3. Future tense: خواه + short infinitive

Formed with the present of خواستن (*xāh-am, xāh-ī, xāh-ad, xāh-īm, xāh-īd, xāh-and*) plus the **short infinitive** (past stem; بردن → شد, نگاهستن → نگاشت). Negation: نخواهم نگاشت etc. Note the short infinitive does **not** take endings — all person/number marking is on the auxiliary.

Lines 119–120: ولی من شرح کارهایم در روزگارم را خواهم نگاشت *valī man šarḥ-e kārḥā-yam dar rūzgār-am-rā xāham negāšt*. But I will write an account of my works in my days.

4. Subjunctive after تا

تا + subjunctive marks purpose ("so that"). The subjunctive is formed with the present stem + personal endings, usually with the *be-* prefix (for simple verbs) or without (for compound verbs).

Line 84: از او خواست تا آن را بخواند *az ū xāst tā ān-rā bexānad* He asked him to read it ("so that he might read it").

Lines 153–155: تا آنها را ... به قدرت رهایی توانا سازد *tā ānhā-rā ... be qodrat-e rahāyī tavānā sāzad* that he may enable them ... by the power of deliverance.

5. Ezafe chains

The unstressed suffix *-e* (or *-ye* after vowels) links head noun to modifiers in sequence. Long chains stack as **head – modifier – modifier – modifier**. Written text usually leaves the ezafe unwritten except on words ending in silent ه (→ ی) or ه (→ ة).

Lines 151–152: رحمت‌های مهرآمیز سرور *rahmat-hā-ye mehr-āmīz-e Sarvar* the tender mercies of the Lord.

Line 19: ستونی از آتش *sotūn-ī az ātaš* a pillar of fire. [here **az** introduces the material, not ezafe — contrast with ezafe-linked modifiers]

6. Indefinite -ī

The suffix *-ī* attached to a noun marks "a, a certain, one" (similar to English *a/an*). Don't confuse it with the *-ī* that makes adjectives abstract-nouns (خوب "good" → خوبی "goodness") — context usually disambiguates.

Line 83: *be ū ketāb-ī dād* He gave him a book.

Lines 25–26: *az pedar o mādar-e xūb-ī zāde šode* born of goodly parents. [here خوبی modifies the ezafe-chain مادر و پدر and carries the indef. *-ī*]

7. Direct-object marker را

را clitic marks a **specific/definite** direct object. It attaches to the **end of the whole object phrase**, not to the head noun — so it often sits after relative clauses, adjectives, or even coordinated phrases.

Line 18: *Nīfāy negāšte-ye mardom-aš-rā šorū' mī-namāyad* Nephi begins the account of his people. [*-rā* marks the whole phrase نگاشته مردمش]

Also compare lines 37–38 *این نگاشته ای که می‌نگارم راست است* (no را, because it's a predicate) with lines 38–39 *آن من را با دست خودم می‌نگارم* (را marks the definite direct object).

8. Compound verbs (light-verb constructions)

Persian builds most of its verbs as **noun/adjective + دادن / زدن / شدن / کردن / ...**. The "meaning" lives in the non-verbal element; the light verb handles inflection. Examples from this chapter: نبوت کردن (to prophesy), ستایش کردن (to praise), توبه کردن (to repent), نیایش کردن (to pray), گواهی دادن (to testify), نشان دادن (to show), نابود شدن (to be destroyed), چیره شدن (to be overcome), پیش رفتن (to go forth), تکان خوردن (to be shaken), بانگ برآوردن (to raise a cry).

Line 21: *āmadan-e Masīḥ-rā pīšgūyī mī-konad* He foretells the coming of Christ.

9. Possessive / pronominal suffixes

Attached directly to nouns: *-am* (my), *-at* (thy), *-aš* (his/her/its), *-mān* (our), *-tān* (your), *-šān* (their). Persian usually prefers these clitics to the full-pronoun + ezafe construction (کتابم → "my book" کتاب من).

Lines 25–26: *man, Nīfāy, az pedar o mādar-e xūb-ī zāde šode*

Lines 32–33: *negāšte-ī az kārḥā-yam dar rūzgār-am-rā mī-negāram* I write an account of my works in my days. [*-am* on *kārḥā* and on *rūzgār*; *-rā* marks the whole phrase as direct object of می‌نگارم]

Watch especially for *-aš* in third-person narrative: پدرش *pedar-aš*, روزگارش *rūzgār-aš*, جانش *jān-aš*, دلش *del-aš*, روانش *ravān-aš*, مردمش *mardom-aš*.

10. Archaic / biblical register

The translation deliberately uses a high-register Persian that mirrors the KJV-style English of the original. Things to recognize:

- گفتا (*goftā*) — archaic narrative past of گفتن, roughly "said he" (the *-ā* is a narrative ending in classical Persian).
- آری (*ārī*) — "yea, indeed," peppered throughout; literary equivalent of بله.
- بنگرید (*benegarīd*) — "behold!" (2pl imperative of نگرستن).
- سرور (*Sarvar*) — the translator's word for "the Lord"; in ordinary Persian it means "master, chief." Vocative سرورا (line 98, "O Lord!") uses the classical *-ā* vocative.
- Bookish verbs chosen over everyday equivalents: نوشتن for نگاشتن (write), نیایش کردن for دعا کردن (pray), برآوردن for فریاد زدن (cry out), نمودن for نشان دادن.

Line 87: *ū xānd, goftā: vāy, vāy bar Uršalīm* And he read, saying: Woe, woe unto Jerusalem.

11. Relative clauses with که

که introduces both complement clauses ("that he ...") and relative clauses ("who, which, that"). For relatives the head noun usually carries indefinite *-ī*, i.e. *X-ī ke ...* = "an X which ...". The verb inside the relative clause is in whatever tense fits the sense.

Line 58: *be sabab-e ċīzhā-yī ke dīd o šenīd* because of the things which he had seen and heard.

Note how *ی + ی + ها + چیز* stacks: plural *-hā* + ezafe *-ye* (invisible in writing) + indefinite *-ī* → *ċīzhā-yī*, then که introduces the relative.

12. Imperfective می and its negation نمی

The prefix *mī-* marks non-perfective aspect — present-tense, habitual, or past-progressive readings depending on the stem:

- Present stem + *mī-* + endings → present (می‌نگارم = "I write / I am writing").
- Past stem + *mī-* + endings → past habitual/continuous (می‌کرد = "he used to do / was doing").

Negation fuses: نمی‌نگارم ("I do not write"), نمی‌کرد ("he was not doing"). Watch out: in compound verbs the *mī-* attaches only to the auxiliary: نبوت می‌کند, گواهی می‌داد.

Lines 111–113: *va īnak man, Nīfāy, sargozašt-e kāmel-ī az ċīzhā-yī ke pedar-am nevešte ast nemī-negāram* And now I, Nephi, do not write a full account of the things which my father has written.

A final note on reading strategy

The chapter packs many of the constructions you'll meet repeatedly: the *چنین* opener, *شدن*-passives, ezafe chains, compound verbs with *کردن/شدن*, object-marker را riding on long noun phrases, and relative *که*-clauses. Once those click, the vocabulary starts to do most of the work. Read verse-by-verse, resist reaching for the translation until you've parsed the Persian yourself, and keep this guide open to the vocab page — most of chapter 2 will reuse ~60% of it.
